

Comparison of Genuine and counterfeit products

Genuine

Counterfeit

第1款假冒产品识别 The first fake product identificaton

第2款假冒产品识别 The second fake product identificaton

单看外观难辨真假

It's hard to distinguish between true and false by its appearance

盗版有加强筋

the device looks the same as original product.

Why prompt for fake product?

1. Some people changed the TL866CS programmer to 866A. then Destroyed checksum of the serial number in the product. if use Original serial code. There is no limit to the normal use of programmers. just a warning about clone.

2. if use Random generated serial code. you can not upgrade more. Only reset the programmer to old software

version. because the fake makers use the same way to production.(Warning: there are at least 20 ways to verify serial numbers.)

3. In fact, if there is no counterfeit hardware products, we will not limit the software(TL866CS programmer to 866A), but the emergence of hateful counterfeiters, it is really helpless action.

4. Finally, TL866CS / A has been stop production for a long time, we only provide few upgrading for old products. XGecu TL866II PLUS has stronger encryption. It has stronger functions, faster speed and better experience.

Reset Programmer to Old Software Version

if the programmer is bricked. you can add a resistor(about 240 ohm) as the follow picture. and install old version software , then reflash firmware. then remove this resistor.
