## Description

The PAL10H8 Series is made up of nine combinatorial 20-pin PAL devices. They implement simple combinatorial logic, with no feedback. Each has sixteen product terms total, divided among the outputs, with two to sixteen product terms per output.

## Polarity

Both active high and active low versions are available for each architecture. The 16C1 offers both polarities of its single output.

## Performance

The standard series has a propagation delay (t<sub>pd</sub>) of 35 nanoseconds (ns), except for the 16C1 at 40 ns. Standard supply current is 90 milliamperes (mA).

## Packages

The commercial PAL10H8 Series is available in the plastic DIP (N), ceramic DIP (J), plastic leaded chip carrier (NL), and small outline (SG) packages.

- These are absolute values with respect to the ground pin on the device and include all overshoots due to system and/or tester noise. Do not attempt to test these values without suitable equipment.
- No more than one output should be shorted at a time, and duration of the short circuit should not exceed one second.
